

SUPPLEMENTARY MATERIAL S4

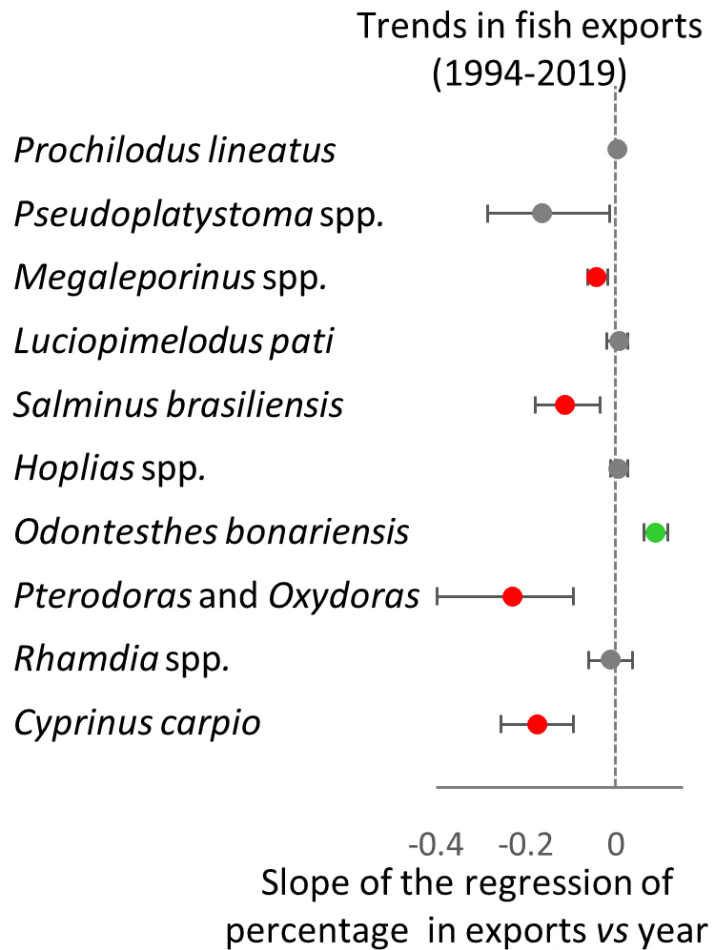

FIGURE S4 | Figure showing the trends in annual freshwater fish exports of Argentina of 10 fish taxa between 1994 and 2019. Symbols represent the slopes of the linear regressions between year and the percentage in weight of each fish taxa with respect to total annual exports excluding *Prochilodus lineatus*. For *P. lineatus*, the percentage of exports are referred to the volume of total exports. Red symbols indicate slopes with significant negative values, green symbols indicate slopes with significant positive values and grey symbols indicate slopes non significantly different from zero. Whiskers around each symbol indicate 95% confidence intervals generated by bootstrap method.
