

SUPPLEMENTARY MATERIAL S6

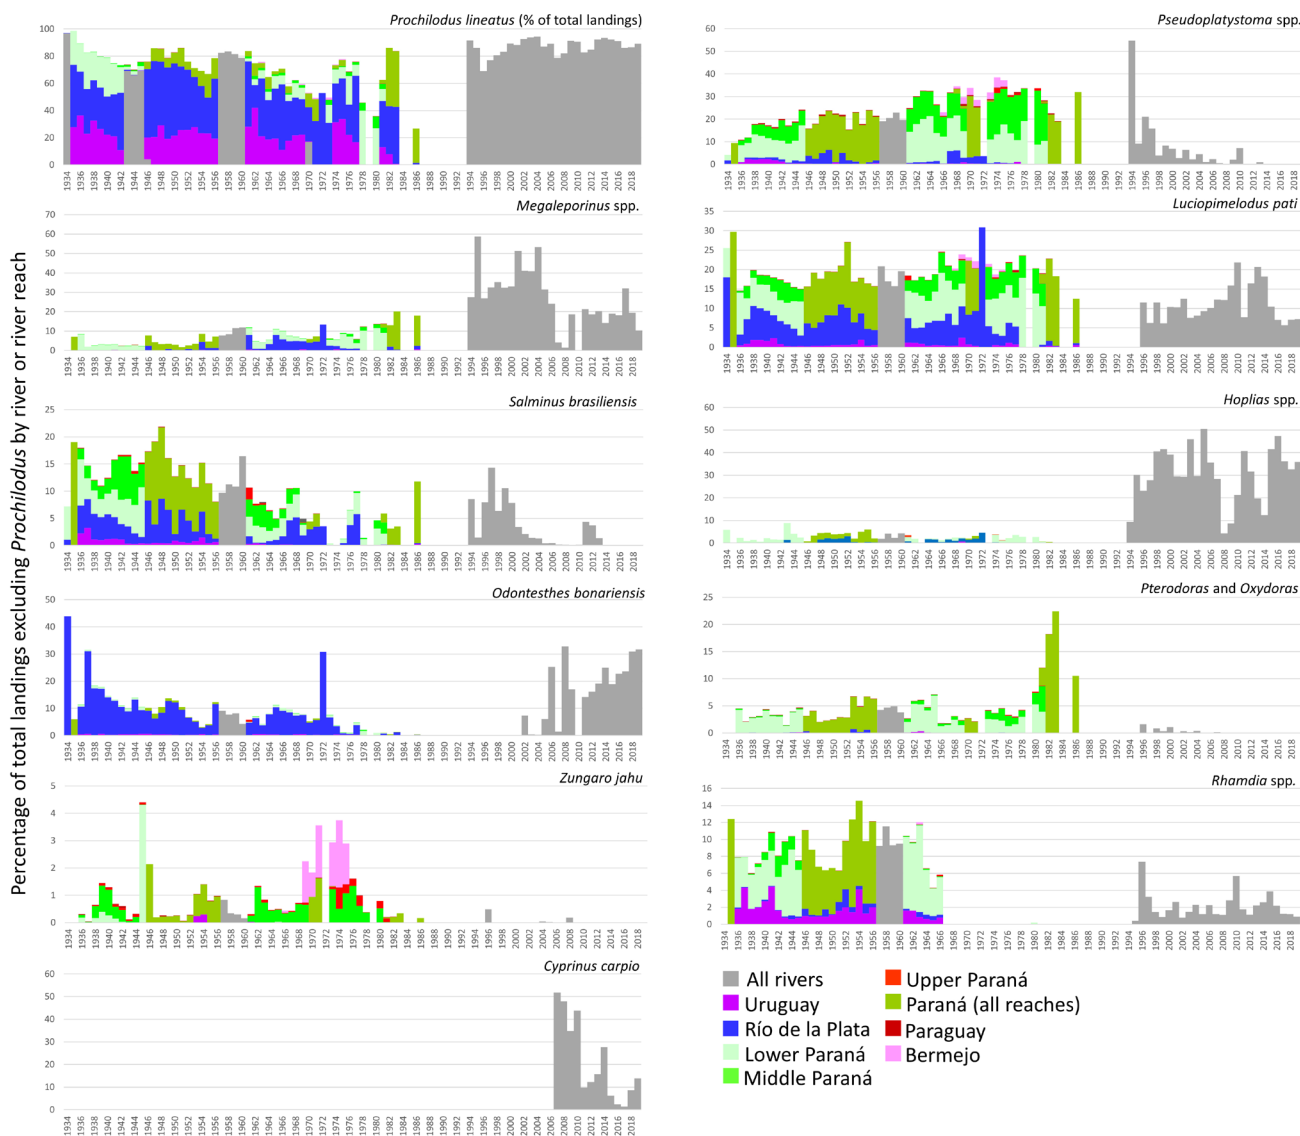

FIGURE S6 | Figure showing the trends in the percentage of the landings of eleven fish taxa from 1934 to 2019 expressed as percentage in weight with respect to total annual landings excluding *Prochilodus lineatus*. The percentage of *P. lineatus* is referred to total landings of each year. Data from 1934 to 1986 corresponds to fishery production of Argentina in the La Plata basin, and data from 1994 to 2019 corresponds only to freshwater fish exports of Argentina. Colors indicate the landings for each river of the basin.
