

FIGURE S1 | Comparison of mean relative abundance (% of biomass in kg) of *Plagioscion squamosissimus* sampled in the Tapajós (n = 9) and Tocantins rivers (n = 5). Mean (dark vertical line), data distribution (bean gray area), data (points), confidence interval (rectangle). Points indicate the sampling sites (fishing communities), considered as replicates in this analysis. The statistical t-test was conducted with log-transformed data, but the graph shows the original data.
